

ACKDAY 1.0 • TECH FOR A BETTER TOMORROW

# SAHAAYA

Voice-First Government Scheme Navigator

*"Speak. Discover. Benefit."*

Indian Languages • 22+ Verified Schemes • 100% Deterministic Matching

Sudeshna Kalluri • Poornima Paidy

Team "kallurisudeshna"

## 01 • PROBLEM STATEMENT

# Welfare exists. Awareness doesn't.

India runs hundreds of central and state welfare schemes — yet millions of eligible citizens never discover the support available to them.

### Language & literacy barriers

Portals are English-heavy and form-driven, shutting out citizens who think and speak in regional languages.

### Fragmented information

Central and state schemes live on dozens of separate portals with no single, trustworthy source of truth.

### Complex eligibility rules

Citizens can't tell which of 700+ schemes apply to their exact life situation — age, land, income, family status.

### Last-mile dependency

Rural citizens rely on scarce CSC operators or agents, often travelling long distances for basic guidance.

## 02 · PROPOSED SOLUTION

# A conversation, not a form.

Sahaaya turns scheme discovery into a natural spoken conversation — in the citizen's own language.

**Responsible by design:** the LLM only extracts stated facts — it never invents benefits or decides eligibility. All matching runs in verified, deterministic code.

### 03 • TARGET USERS

# Built for the citizens portals leave behind.

Sahaaya is designed first for the people most underserved by digital government services.

## Farmers & rural landholders

PM-KISAN, crop insurance, Kisan Credit Card, and irrigation support — matched to land size and crop details.

## Senior citizens

Old-age pension, Atal Pension Yojana, and senior annuity schemes explained in plain, spoken language.

## Women & widows

Widow pension, maternity benefits (PMMVY), and SHG credit schemes like Lakhpati Didi.

## Low-literacy citizens

Anyone uncomfortable with English forms or web navigation — the whole journey works by voice alone.

# Simple stack. Deterministic core.

## Voice Input

Web Speech API (STT/TTS)

## React + Vite + Tailwind

Frontend UI, 7 languages

## Express.js API

Backend orchestration

## Dual-Engine NLP

Heuristic + optional Gemini

## Rules Engine

Deterministic, 22+ schemes

## 2+ Verified Schemes

Agriculture · Education · Women & Widows · Healthcare · Pension · Housing ·  
Employment — each with official portal links and last-verified dates.

## Trust Status Logic

Likely Eligible · Needs More Info · Doesn't Appear to Match — every result is  
explainable, sourced, and free of AI-invented benefits.

# A civic-tech layer for every welfare scheme.

Sahaaya sits between government schemes and the citizens they're meant for — a gap worth closing at national scale.

**700+**

Central & state schemes across India today

**22+**

Schemes verified & live in the MVP, extensible by design

**₹41,200+**

Potential yearly benefit surfaced for a single de  
persona

## Government & CSC partnerships

License to state e-governance missions and Common Service Centres as an assisted-discovery layer for operators.

## NGO & CSR collaboration

White-labelled deployments for NGOs and CSR programs working on financial & welfare inclusion.

## Direct-to-citizen app

Free core discovery for citizens, with premium application-tracking and document-vault features time.

# From hackathon MVP to national coverage.

The architecture is built to scale in three directions: more languages, more schemes, more channels.

## PHASE 1 — TODAY

### Hackathon MVP

languages, 22+ schemes, deterministic engine,  
voice UI, printable action plans.

## PHASE 2 — PILOT

### State & CSC Rollout

Onboard 2–3 state welfare departments; CSC  
operator dashboard; full central + state scheme  
corpus.

## PHASE 3 — SCALE

### National Coverage

IVR/SMS for feature phones, offline-first PW  
22 official languages, live DBT status tracking

07 · IF WE HAD MORE TIME

# What we'd build next.

Six directions we scoped but didn't have hackathon hours for — each one deepens reach or trust.

## IVR & WhatsApp bot

Missed-call / WhatsApp flow so feature-phone users get same voice-first experience with no app or smartphone.

## Live DBT status tracking

Direct integration with government portals to show real application and disbursement status, not just eligibility.

## Offline-first PWA

Full offline caching and SMS fallback so low-connectivity rural areas aren't left out.

## Regional-accent ASR tuning

Regionally-tuned speech models per state and dialect to push voice-recognition accuracy even higher.

## CSC operator dashboard

A companion console so Common Service Centre staff can file applications on a citizen's behalf.

## Full scheme corpus

Grow from 22 curated schemes to an auto-updating database covering all central and state programs.
